DATE
First Quarter 2026

TRACK
Data Analytics Track

1 GENERAL OVERVIEW & BUSINESS CONTEXT

The **FinTrust Digital Bank** project aims to transform raw customer and financial transaction data into actionable business intelligence to support strategic decision-making. Week 2 marks the transition from planning to practical execution through data cleaning, SQL analysis, Python exploration, and Power BI dashboard design.

2 DATA QUALITY ASSESSMENT

A rigorous assessment across 150,000 cells (100% of the population without sampling) resulted in the following diagnostic evaluation:

DIMENSION	RESULT / STATUS	OBSERVATIONS & BUSINESS IMPACT
Customer Volume	1,500 RECORDS	No duplicates, 100% primary integrity.
Transaction Volume	12,000 RECORDS	Covers the continuous period from 01/01/2026 to 03/31/2026.
Missing Values	192 CELLS (0.8%)	Concerns only Device_Type and Location (imputed as 'Unknown').
Referential Integrity	100% MATCH	All transactions are linked to a valid Customer ID.
Financial Values	₦560,477,354.85	No negative or zero values. Average amount: ₦46,706.45.

3 KEY BUSINESS FINDINGS (1 – 3)

Finding 1: Volume Concentration in the Everyday Segment

RETAIL OPERATIONS

EVIDENCE The 'Everyday' segment alone generates 5,644 transactions for a cumulative value of 261.46 million NGN (46.6% of total volume).

BUSINESS IMPACT Payment acquisition and processing infrastructures must be prioritized for optimization to serve this mass-market segment.

Finding 2: Vulnerability of Web and ATM Channels

CHANNEL RISK

EVIDENCE The Risk Review Rate reaches 21.35% on Web and 21.18% on ATMs, compared to just 17.32% on the USSD channel.

BUSINESS IMPACT The Web channel requires immediate strengthening of Multi-Factor Authentication (MFA) protocols.

Finding 3: Overexposure to Risk in International Transactions

FRAUD EXPOSURE

EVIDENCE International transactions show a risk review rate of 36.88%, nearly double the domestic rate of 18.88%.

BUSINESS IMPACT Enhanced real-time monitoring of cross-border payments is essential to prevent fraud.

3 KEY BUSINESS FINDINGS (CONTINUED)

Finding 4: Anomaly in the Lower Income Bracket

CUSTOMER BEHAVIOR

EVIDENCE Customers in the 'Below 100k' bracket display an average transaction amount of 49,477.90 NGN, the highest across all income brackets.

BUSINESS IMPACT This suggests shared account usage or informal, undeclared income at account opening.

Finding 5: Technical Failures Concentrated on Bill Payments

SYSTEM STABILITY

EVIDENCE Bill payments ('Bill Payment') experience a technical failure rate of 5.83% and a reversal rate of 2.31%.

BUSINESS IMPACT API integrations with utility providers must be reviewed to improve the overall transaction success rate.

4 SUMMARY ACTION PLAN & STRATEGIC ROADMAP

AREA	RECOMMENDED ACTION	PRIORITY	TARGET HORIZON
Web Security	Deploy enforced MFA and biometric authentication step-ups for web transactions.	HIGH	Immediate (Q2)
Cross-Border Payments	Implement automated real-time transaction monitoring and geo-velocity rules.	HIGH	Q2 2026
Bill Payment APIs	Audit third-party utility API gateways and introduce automated retries/failovers.	MEDIUM	Q2-Q3 2026
Mass Segment Scaling	Optimize core payment processing infrastructure for 'Everyday' high-volume traffic.	MEDIUM	Q3 2026
KYC & Income Profiling	Re-evaluate customer tiering rules and account limit thresholds for low-income profiles.	STANDARD	Q4 2026
